International Space Station Capabilities and Payload Accommodations
International Space Station Facts

Spacecraft Mass: 799,046 lb (362,441 kg)
Velocity: 17,500 mph (28,200 kph)
Altitude: 220 miles above Earth
Power: 80 kW continuous
Science Capability: Laboratories from four international space agencies – US, Europe, Japan, and Russia
Assembly Complete Configuration

International Space Station

- Pressurized Laboratories
- External Payload Facilities
The Microgravity Environment

The ISS is equipped with an array of sensors that monitor perturbations to the microgravity state on-orbit.

Even without the Active Rack Isolation System, vibrations are typically within ISS requirements.

While the Station is at its most “quiet” during the eight hours of crew sleep, the Active Rack Isolation System can be effective even during crew exercise.
## On Orbit Resources Provided to Payloads

<table>

## Upgrades In Work

| **Enhanced Processor and Integrated Communications (EPIC) Project** | Phase A will upgrade the three Command and Control (C&C) MDMs and the two Guidance, Navigation, & Control (GN&C) MDMs.  
Phase B will upgrade the two Payload MDMs, and add Ethernet support for the C&C and Payload MDMs. |
| **Air to Ground High Rate Communications System (HRCS) Project** | Increase data rates internally and on the RF link (300 Mbps downlink, 7/25 Mbps uplink)  
Combine audio and video on orbit  
Provide two way, high quality audio  
Open the door to internet protocol communications  
Open the forward link to multiple users  
Allow for the capability of transmitting & recording HDTV |
| **On Orbit External Wireless High Rate** | 100 Mbps 2-way Ethernet capability  
1 Mbps 1553 capability  
Up to 4 antennas attached to EVA handrails on US Lab |

ISS Visiting Vehicles Post-Shuttle

- Cygnus (Orbital)
- ATV (ESA)
- HTV (JAXA)
- Dragon (SpaceX)
- Progress/Soyuz (Energia)
HTV

Upmass
- Internal
  Powered: None
  Late Load
    » Maximum 3 CTBE (0.5 or 1.0 CTB), each <20 kg
    » Additional possible if negotiated in advance.
- Racks
  » Up to 8 passive racks
  » Forward Bay: ISPR compatible
  » Aft Bay racks fixed: HTV Resupply Rack
- External
  Exposed Pallet (on following chart)
- On Dock
  Cargo: L-6 months
  Late Load: L-6 weeks

Downmass
- Internal
  Disposal only
- External
  Disposal only

Dragon

**Upmass**
- Internal
  - Powered: Double MLE
  - Late Load: T-12 hrs for powered MLE; TBD days for nominal
  - Racks (SpaceX-designed)
    » ~3300 kg mass
- External
  - Trunk capability

**Downmass**
- Internal
  - Powered: Double MLE
  - ~1700 kg return
  - Early destow at dock available
  - Fast boat return available
- External
  - Disposal only
ISS Feasibility Assessments

Data Required
- Upmass needed
- Power consumption
- Data rates
- Pointing/viewing needs
- Lifetime required on orbit
- Return plan

Timeline
- Initial 1 hr telecon set up after contacting Marybeth Edeen
  - Contact information in the AO
- 2-3 follow on telecons after initial data exchange
- Draft feasibility letter provided ~ 3 weeks after initial contact
- Final letter approved and signed ~4 weeks after initial contact
ISS Feasibility Assessment Evaluation Criteria

- In performing the feasibility assessments, the ISS payloads office looks at whether or not the proposed payload meets the standard interfaces or requires significant non-standard integration.

- For example, the volumes are defined for each platform but there are specific dimensions that make up those volumes:
  - Working with the proposer, we will evaluate the dimensions and determine if the payload is within the standard dimensions or exceeds those dimensions in one or more areas.
  - If it exceeds the standard interfaces, we will provide an evaluation of how simple or hard it will be to accommodate those non-standard interfaces.
  - The proposer will be made aware of any non-standard interfaces to determine if they can redesign to stay within the standard interfaces.
  - A lot of times, non-standard interfaces CAN be accommodated but it requires additional work.
ISS Payload Requirements

- ISS payload requirements do not flow from NPR 8705.4 and thus the Class A/B/C/D levels are not directly applicable.

- For the ISS requirements, payload success is not part of the requirements set, although it may very well be a requirement for the Science Mission Directorate.

- Many requirements of Class D payloads are acceptable to ISS, however, in a number of areas, the man rating requirements will be stricter and more like Class A requirements.

- If a payload is selected for an ISS mission of opportunity, the ISS payloads office will work with the payload developer to develop the set of requirements that must be verified to fly on an ISS transportation vehicle and on the ISS.
